Jaroslav Kolář - reference

Jaroslav Kolář implemented for ČSOB group data warehouse in SAP BW for procurement process. This part of SAP BW takes data from SAP SRM system (shopping carts, workflow), from SAP R3 system (purchase orders, invoices) and provides BEX reports to end users.

Jaroslav proved his long term experience in this area and the new data warehouse successfully replaced unusable previous one (created by people not so experienced in procurement BW area).

We were very satisfied with the ability of Jaroslav to deal with end users, understand their requirements and his knowledge of Procurement process in SAP SRM / SAP R3 in general.

Jaroslav also supports maintaince of SAP BW for procurement and not much support is needed in fact as this BW Procurement is well designed.
